Company Profile

Established in 1984 and headquartered in Daxi Town, Wenling City, Zhejiang Province—a town with flourishing pump industry, Shimge Pump Industry (Zhejiang) Co., Ltd. is a limited liability company specialized in producing various kinds of pumps and control equipment. For over three decades, Shimge Pump Industry has been committed to technical researches, manufacturing and marketing of all kinds of pumps and control equipment, as well as providing first-class pumps and water treatment system solutions for the world.

Based on keen market insight, the company developed the “screw pump” in 1987, which filled the gap in the domestic market at that time. Due to its excellent quality, Shimge soon stood out in the industry, and started its journey as a legendary brand in China’s pump industry. The company was once successfully listed in the A-share market in Shenzhen Stock Exchange on December 31, 2010 (stock code: 002532. According to the development strategy of the company, it was delisted in the form of asset reorganization and completed privatization in July 2020^{*}). Currently, the company has 6 major brands, 12 product series with more than 2,000 specifications, and 8 holding subsidiaries, becoming a real leading brand in China’s pump industry.

Shimge's production base in HangZhou, Zhejiang Province

Shimge's production base in SanChiku, Wenling, Zhejiang Province

Shimge's casting parts production base in JiangSu Province

Shimge's casting production base in JiangXi Province

Shimge's casting production base in JiangSu Province

High Quality Production

FOR BETTER LIFE

Shimge sticks on the comprehensive innovation on R&D and production process which commits to improve the production process and efficiency.

Strict Quality Control

FOR BETTER LIFE

Since its establishment, Shimge has always actively promoted comprehensive “lean” quality and environment management, and has currently passed ISO9001, ISO14001 and OHSAS18001 certification, introduced excellent performance management in line with GB/T 19580 and established a sound quality assurance system.

SHIMGE has equipped an industry-leading physicochemical testing center, and its delivery performance inspection platform has reached a precision of grade B (grade 1) in the evaluation conducted by an authoritative agency. In addition, its products have passed GS, CE and UL certification, and met the specifications of the RoHS Directive.

Vertical Multi-Stage Centrifugal Pumps

BL(T)

High-efficiency standard motor, NSK SKF bearings and cold-rolled 50ww800 silicon steel sheet made the pump high efficiency, low noise and maintenance-free. Totally enclosed shaft seal, IP55 protection grade, F class insulation grade, the special "double-lock" drive end bearing made the pump withstand higher inlet pressure.

Balanced & container-type shaft seal with all the parts assembled together, no axial rotating to prevent the shaft and rubber parts from wearing, with the characteristics of rapid changing, easy installation and safe operation. Dynamic sealing is made of cemented carbide materials and the static sealing is fluorine rubber material which make the mechanical seal to be high temperature resistance, long service life, easy changing and other significant characteristics.

Being produced by the most advanced international laser welding technology,, no eliminate welding, ensure the high intensity and efficiency. The processing technology: precision casting, CNC lathe, CNC machining center, the modern advanced technology such as the laser welding technique and processing equipment.

The built-in floating sealing ring of the pump cavity body could minimize the internal leakage produced by the differential pressure and prevent the energy consumption when liquid leaking back to the pump cavity body.

The pump core parts are designed to be multilevel interlocking, fastening nut locked, component system interlock assembly industry, to minimize the gap between the impeller per level, improve the efficiency of the impeller water conservancy, and ensure the stability, reliability and efficiency of the pump core components.

Cold extrusion spline shaft with good surface quality, high machining accuracy, at the same time improve the comprehensive mechanical properties of the shaft and the reliability of the pump

Model Instruction

Overview Of The Product

BL(T) series stainless steel multi-stage centrifugal pump (afterwards called pump) boasts characters of high efficiency, low noise, steady operation, etc. The pump set adopts the non-self-priming vertical multi-stage structure, which makes a compact whole, its installation easy, its operation and maintenance convenient.

Application Limits

- ◎ Medium temperature: normal type: 0°C ~ 68°C hot water type: 0°C ~ 120°C,
- ◎ Ambient temperature: +40°C,
- ◎ Advisable to use motor of higher power in case that the density or viscosity of medium is above that of water.
- ◎ pH: 5 to 8

Application Limits

Water supply	BL	BLT
Filtration and transfer at waterworks	●	●
Distribution from waterworks	●	●
Pressureboosting in mains	●	●
Pressure boosting in high-rise buildings, hotels, etc.	●	●
Pressure boosting for industrial water supply	●	●
Industry		
Pressure boosting	●	●
Process water systems	●	●
Washing and cleaning systems	●	●
Vehicle washing tunnels	●	●
Fire fighting systems	●	●
Liquid transfer		
Cooling and air-conditioning systems (refrigerants)	●	●
Boiler feed and condensate systems	●	●
Machine tools (cooling lubricants)	●	●
Aquafarming	●	●
Transfer		
Oil and alcohol	●	●

Calculation Of minimum Inlet Pressure

If the pressure in pump is lower than the vapour pressure of medium, cavitation will occur, which will affect the performance of pump. To avoid the cavitation and ensure the pump inlet has a minimum pressure, maximum suction head should be calculated as following:

$$H = P_b \times 10.2 - NPSH - H_f - h_v - H_s$$

Pb: Atmospheric pressure, bar (In close pipeline system, it can be considered as the system pressure);

NPSH: Net positive suction head, m (Value at maximum flow of Q-NPSH curve);

Hf: Suction pipe line loss (Value at maximum flow of corresponding pipeline);

Hv: Medium vapour pressure, m (Medium vapour pressure at corresponding temperature, the default medium is water, as shown in figure4 on the right);

Hs: Safety margin, m, general value is 0.5.

Calculation result: if H is positive, the pump is installed in suction way, otherwise, it is installed in downdraft way.

Note: It is not necessary to do above calculation under general conditions. Only when we use pump in the following situations do we need to calculate the H:

- Medium temperature is high;
- The velocity of flow is larger than rated value;
- Suction head is big or inlet pipeline is long;
- System pressure is small;
- Inlet condition is bad.

Fig. 2

Selection Of Pumps

- Duty point of the pump.
- Dimensional data such as pressure loss as a result of height differences, friction loss in the pipework,
- Pump efficiency etc.
- Pump materials
- Pump connections
- Commonly used mechanical seal configuration tables

Duty point of the pump:

From a duty point it is possible to select a pump on the basis of the curve charts shown in "performance curves/technical" data.

Dimensional data:

When sizing a pump the following must be taken into accounting:

- Required flow and pressure at the draw-off point.
- Friction loss in the pipework(Hf) (Refer to Fig.1) It may.
- NPSH value.
- Pressure loss as a result of height differences.
- Best efficiency at the estimated duty point.
- For calculation of the NPSH value, see corresponding curves chart.

Pump efficiency:

Before determining the best efficiency point, the operation pattern of the pump needs to be identified. If the pump expected to operate as the same duty point, then select a BL pump which is operating at a duty point corresponding with the best efficiency of the pump.

As the pump is sized on the basis of the highest possible flow, it is important always to have the duty point to the right on the efficiency curve(eta) in order to keep efficiency high when the flow drops.

Fig.03

■ Pump material:

Selection of pump connection depend on the rated pressure and pipe work. the pump offer a wide range of texible connection such as:

- Loose round flange
- Pipe thread
- Oval flange
- Round flange

Fig. 4

The limits of pressure and temperature are shown in the following fig.4,the pressure and temperature must be in the shown in the fig. 4.

Maximum Ambient Temperature

When the pump is operating in the place where ambient temperature is higher than 40°C or altitude is higher than 1000m,the output power of motor P2 will decrease because of poor cooling caused by low air density.Therefore,in that case,the pump should be equipped with high-power motor.

Model Instruction

Overview Of The Product

BW, BWJ stainless steel horizontal multistage centrifugal pumps are non-self priming pumps absorbing the advanced technology from home and abroad. They are classified into two kinds: cylinder type and sectional type. They adopt horizontal motor and alloy mechanical seal, which makes the replacement more convenient. The overflowing part of the pump is made of stainless steel 304, applicable for light-corrosion medium. Relying on the high efficiency, energy saving performance, reliable quality, wide usable range, our products receive the great popularity after being launched.

Application Limits

- ⦿ Temperature range of medium: Normal type 0 ~ +68°C , hot water type 0 ~ +120°C
- ⦿ Maximum ambient temperature: +40 °C
- ⦿ Maximum system pressure : 1.0MPa
- ⦿ When the density or viscosity of the transmission medium exceeds that of water, it is necessary to select a drving motor of high-power.
- ⦿ pH: 5 to 8

Applications Fields

- Air conditioner system
- Aquaculture
- Cooling System
- Industrial cleansing
- Environmental application
- Water processing(Water purification)
- Fertilization/measuring system
- Other special applications

Certificate

Optional Available On Request

- ⦿ Full-enclosed and ventilating two-pole standard motor
- ⦿ Protection class: IP55
- ⦿ Insulation class: F
- ⦿ Standard voltage (50Hz): Single phase 220V Three phase:380V or 220/380V

Fully integrated pump variable frequency pump

Model Instruction

Product Overview

The fully-integrated intelligent variable-frequency pump is a new generation of equipment for pressurized water supply, highly integrated by the newly-developed frequency controllers and water pumps and pressure tanks of the Company, presenting a beautiful appearance and reaching an international advanced level. Such pump has capacities of artificial intelligence and automatic adjustment to meet the user's demand for constant-pressure and variable-frequency water supply, which can help to keep constant the pressure of the water supply network and the whole system always at the best energy-efficient state.

Application

- ⊙ Domestic water for residents: pressurization on the roof of high-rise buildings, apartments, and villas etc.
- ⊙ Public places: schools, restaurants, stations, hospitals, and stadiums etc.
- ⊙ Commercial buildings: hotels, office buildings, and department stores etc.
- ⊙ Irrigation: farms, fruit gardens, and parks etc.
- ⊙ Industry: manufacturing, food industry, industrial water, and other places needing constant-pressure water supply etc.

Applications Fields

- ⊙ Operating voltage: AC220V±10% at 50HZ, with phase-to-phase imbalance less than 2%;
- ⊙ Ambient temperature: -5° C ~ 40° C;
- ⊙ Altitude of installation site: no higher than 1,000m;
- ⊙ Ambient humidity: 10-90%RH (non-condensing);
- ⊙ No medium with explosion hazard in ambient air and no medium containing any gas or conductive dust which can corrode metal or damage insulation; application in environment of which the pollution degree is 2.

Certificate

Functions

- ⊙ When using water, the system will present its constant-pressure and variable-frequency control, while it will automatically maintain pressure and stop in case of no water used.
- ⊙ The fluctuation range of the operating pressure of variable-frequency pump shall be no more than 0.01MPa.
- ⊙ The pump will stop working in case of idling without water.
- ⊙ It is able to inspect several faults concerning disconnection, overcurrent, overload, and grounding.

Features

- ◎ Frequency converter: IP65, safe and reliable
- ◎ High level of integration: The water pump is integrated with the frequency converter, so it is small in size and can be installed easily and save space.
- ◎ Full-automatic control: The product can automatically adjust its operating state on the basis of the pressure of the network of the user, to achieve its best working state and make the system energy-saving. When no water is used, automatic pressure maintenance and sleep will be realized and, therefore, the energy-saving effect is quite obvious. In case of failure of water pump, real-time tracking, judgement, and treatment will be carried out automatically.
- ◎ Easy and convenient operation: The man-machine interaction can be achieved directly via the keys and the display on the frequency converter. The user can make settings relating to pressure on the basis of its actual operating conditions and obtain the relevant information. In the event of any abnormality, the information about such an abnormality can be got as well.
- ◎ Constant-power operation: When the controller reaches the power limit, adjustment will be done on the basis of the actual operation, so as to keep the output power unchanged and protect the motor on the premises that the water consumption by the user is guaranteed to the greatest extend.

Equipment spectrum

Action Description

◎ The automatic identification module senses the pressure of the system via a pressure sensor and compares it with the set pressure, and then outputs a continuous analog signal to the frequency converter which changes the operating frequency of the motor on the basis of the change of the analog signal, to finally meet the demand for constant-pressure water supply. When the user's water consumption is large, the rotational speed will increase automatically and the power will be increased accordingly to satisfy the demand for constant-pressure water supply. If no water is used, the system will go to sleep automatically after the set pressure is reached. Where the user uses little water or the water pressure decreases to 80% due to leakage of the piping, the frequency controller will send out a signal to order the motor to operate and then make up for pressure until the set pressure is reached again, to maximize energy saving.

Instructions for Installation

- ◎ When the pump is installed indoors, there should be no water drop, metal dust, oily dirt, corrosive/flammable gas or liquid, or electromagnetic signal interference. When installed outdoors, the pump should be sheltered.
- ◎ The assembling floor of the variable-frequency pump must be firm, without any split or sink.
- ◎ The equipment should be installed with positive pressure at the inlet while installation with negative-pressure suction should be avoided to the greatest extent. In case negative-pressure installation is required, please select a bottom valve with good quality and carry out regular overhauls.
- ◎ The diameter of the inlet pipe and the outlet pipe to be connected with the variable-frequency pump should be greater than the diameter of the variable-frequency pump itself.
- ◎ Please check whether the provided power supply complies with the requirement of the variable-frequency pump for the power supply at the incoming line.
- ◎ During installation, the user should furnish the inlet and the outlet valves of the variable-frequency pump and the relevant flexible connections so as to facilitate repairs and prevent noise from passing through piping.
- ◎ If installation is made with positive pressure at the inlet, please open the vent valve of the water pump and discharge the air prior to use. Do not tighten the vent valve until there is water flowing out. In case of installation made with negative pressure at the inlet, please fill the suction pipe with water prior to use (there should be a filling valve at the suction pipe) and start up the pump after the chamber of the water pump is full of water.

Note:

- ◎ A value inside brackets in the table is to be used for the independent calculation relating to cold water or hot water, when there is hot water supply.
- ◎ When a shower is attached to a bathtub or a mixed-water faucet is provided with a shower converter, then for the calculation of the rated flow and the equivalent, only the faucet should be included. However, the computation of water pressure shall be based on the shower.
- ◎ The water pressure needed by a domestic gas water heater should be determined on the basis of the requirement of the product and the operating pressure needed by the most unfavorable water distribution point of the hot water supply system.
- ◎ The automatic sprinkling irrigation of a green belt should be designed in accordance with the requirement of the product.
- ◎ When there are special requirements for the rated flow and the minimum operating pressure needed by the water supply accessories of sanitary fixtures, their values should be determined as per the requirement of the product (how to determine the equivalence when the requirement of the product is determined).
- ◎ Calculation of maximum water consumption
L=Number of single-valve faucets * Rated flow + Mixed-water faucet * Rated flow +.....+ Number of domestic washing machines * Rated flow
The unit of L to be calculated should be “L/S” , converted into t/h by multiplying 3.6 (for the rated flow, please refer to Table I).

Calculation of minimum pressure

The minimum pressure should be the pressure calculated from the suction surface of the water pump, plus the minimum necessary pressure for the highest sanitary fixture used.

The minimum pressure used by the water supply equipment (Mpa) $\approx 1/100 \times (hg + hf) + pe$

Ha: the actual lift from the suction surface to the highest fixture (m);

Hf: the loss of the piping and the bending, to be calculated as 6m-10m;

Pe: the minimum necessary pressure of the highest sanitary fixture (please refer to Table I).

For example:

There is a small hotel four-storeyed above the ground, about 12m high (calculated from the suction surface), including 12 rooms. Each room is equipped with one closet plan, one washbasin (with a mixed-water faucet), and one shower (with a mixed-water faucet). In addition, the hotel has one faucet for domestic washing machines, four flushing faucets for indoor ground, and four faucets of drinking fountains. Please calculate the flow and the lift of the equipment to be selected.

Answer:

Calculation of the maximum water consumption:

Maximum water consumption=3.6{12 (1*0.1+1*0.15+1*0.24) +1*0.2+4*0.2+4*0.05}=6.084t/h

Calculation of the minimum pressure:

Minimum pressure $\approx 1/100 \times (12+10) + 0.07=0.29$ Mpa

Ha: the actual lift from the suction surface to the highest sanitary fixture, 12m;

Hf: the head loss of the piping and the bending, taking 10m;

Pe: the minimum operating pressure of the shower, 0.7bar.

Note: 1bar $\approx 1\text{kg/cm}^2 = 0.1\text{Mpa}$; 1Mpa is approximately equal to 100m lift of the water pump.

When equipment is selected, the total flow of the selected equipment should be the maximum water consumption and the lift should be no less than the minimum pressure calculated. Please refer to the Equipment Spectrum.

PLD economical vertical multistage pump

PL(D)

Model Instruction

Performance range

- ⊙ max lift: 153 m;
- ⊙ Max flow: 6m³ / h;

Conditions

- ⊙ The temperature of the medium does not exceed +60 ° C;
- ⊙ The ambient temperature does not exceed +40 ° C;
- ⊙ The PH value of the medium is between 6.5 and 8.5, the volume ratio of solid impurities in the medium is ≤ 0.1%, and the particle size is ≤ 0.2mm.
- ⊙ The maximum working pressure is 15 bar;
- ⊙ The highest altitude is 1000m;

Applications

The product has the characteristics of high cost-effective, high pressure and low noise,etc.PL(D) are widely used in many fields,such as water supply system and water filtration and boost systemn for pipeling,washing and cleaning ,boiler feed water,cooling water circulation,water treatment,ultra-filtration,reveser osmosis systems,water fertilizer integrated machine ,etc.

Functions

- ⊙ pump seat / coupling / back cover / inlet pipe: cast iron;
- ⊙ Axis: 304+45 friction welding;
- ⊙ impeller / guide vane: PPO + GF30
- ⊙ Case: YL102
- ⊙ pump barrel: 304
- ⊙ junction box: ABS
- ⊙ mechanical seal: silicon carbide / graphite / nitrile rubber;
- ⊙ Bearing: 6305-2RS / human, 6204-2RS / human, contact sealed;
- ⊙ Motor: 2-pole asynchronous motor, copper coil, fan cooling, continuous operation.
- ⊙ protection level: IP 55;
- ⊙ Insulation class: F.

YS Series Stainless Steel Single Stage Centrifugal Pump

YS

Model Instruction

Product Overview

Made by adopting such advanced technologies as stamping, bulging and welding of stainlesssteel plates, YS stainless steel horizontal single stage centrifugal pump is a new generation of domestically initiative centrifugal pump, which can replace traditional IS pumps and general corrosion-resistance pumps. It has such features as good-looking appearance, lightweight structure, high efficiency and energy saving, robustness, resistance to light corrosion, and low noise.

Operating Conditions

■ The use of YS pump is restricted by the following conditions:

- 1. Clean, thin, and non-flammable & non-explosive liquid that does not contain solid particles and fibers;
- 2. Liquid at the temperature between -20° C and +100° C;
- 3. Maximum ambient temperature: +40° C;
- 4. Maximum altitude: 1000m;
- 5. Maximum system pressure :1.0MPa.

Structural Features

Motor
High efficiency and energy saving
Angular contact bearing is adopted at the drive end, so that the motor operates more safely with lower noise.

Pump body
Stainless steel stamping and welding
Good discharge capacity
Reliable hydraulic self-balancing

Pump cover
Professional style design
Heightened design, equipped with protective cover
Surface electrophoresis treatment
Good ventilation and heat dissipation

Pump cover
Sleeve coupling type
100,000 times of reliability testing
Stainless steel material
Dynamic balancing

Impeller
German casting technology
Efficient hydraulic design
Stainless steel material

The international popular modular design is adopted to reduce the unnecessary parts and components, guarantee the universality of parts, and facilitate purchasing, manufacturing and maintenance.

Applications

YS stainless steel horizontal single stage centrifugal pump is a multi-functional product with a wide range of applications, which can convey various media including water or industrial liquids, applicable to different ranges of temperature, flow and pressure. Its typical applications mainly include the following:

- **Water supply:** Filtering, transmission, sectionalized water supply, and manifold pressurization;
- **Industrial pressurization:** Process water system and cleaning system;
- **Industrial liquid conveying:** Boiler water supply, condensing system, cooling and air conditioning system, machine matching, and weak acid and alkali conveying;
- **Water treatment:** Distillation system or separator, and swimming pool, etc.;
- **Farm irrigation,** and medicine and health, etc.

Motor

- **Structure:** All-series totally enclosed air-cooled three-phase asynchronous standard motor, in which single-phase motor is optional for the power range of 1.1kW ~ 2.2kW.
- **Motor protection:** Single-phase motor is equipped with the built-in thermal protector, and three-phase motor shall be connected to the motor starter according to local regulations.
- **Ambient temperature:** ≤ 40° C; in an environment above this temperature, or when the motor is installed at an altitude above 1000m, due to the lower air density, the cooling effect of motor weakens, the loss of windings and iron core increases, and the operating efficiency reduces, resulting in the drop in the output power (P2) of motor; in this case, a motor with higher output power must be selected, as shown in Figure 1.

■ Figure 1 Relationship between motor output power (P2) and ambient temperature

The product has two structures: integral structure for 1.5kW~4kW, and separated structure for 5.5kW and above; the separated structure is mainly composed of the five core components: pump body, impeller, pump cover, pump shaft, and motor, the motor is separable from the pump, the pump part is designed as the top pull-out structure, and all models are equipped with the standard motor and mechanical seal. The pump body is equivalent to a section of pipeline, and during the maintenance of pumps, the pump body can be sealed with the blank flange so as not to affect the normal operation of the system. The impeller is of an enclosed structure, and adopts the design of the twisted blade, which better ensures high hydraulic efficiency. The pump cover has the dual function of supporting the motor and sealing the pump body, and the seal between it and the pump body adopts the static seal “O-ring” . The dimensions of inlet & outlet flanges of the pump meet the stipulations of such standards as GB/T 17241.6, ISO 7005-2 and DIN 2501

Installation Conditions

YS stainless steel horizontal single stage centrifugal pump adopts direct pump-shaft coupling, and it is composed of the pump, pump shaft and standard motor:

- The pump shall be installed at a ventilated and anti-icing place;
- The pump shall be so properly installed as to ensure that it is not affected by the tension of the system pipeline in use;
 - If the pump is installed outdoors, an appropriate outer cover must be provided to prevent water from entering or condensing in electrical components;
 - In order to facilitate inspection and maintenance, enough space must be left around the unit;
- The electrical wiring device shall ensure that the pump is not damaged by phase loss, instable voltage, electrical leakage and overload;
- The pump shall be horizontally mounted on the base, the horizontal direction is the inlet of pump, and the vertical direction is the outlet of pump.

■ Calculation of minimum inlet pressure

Inlet pressure: In order to ensure that the water pump is in the best operating state, and control the noise at the minimum level, the inlet pressure must be correctly calculated and set. If the pressure in the pump is lower than the vaporization pressure of the conveyed medium, cavitation will occur to the water pump, and in order to ensure a minimum pressure at the inlet of pump, the maximum suction height (m) can be calculated by the following formula:

$H = P_b \times 10.2 - NPSH - H_f - H_v - H_s$
Pb: Atmospheric pressure, unit: ba;
NPSH: Net positive suction height, unit: m (The specific value can be read from the numerical value corresponding to the maximum flow point of pump operation on the NPSH curve in the performance curves of corresponding models);
Hf: The inlet line loss at the maximum flow of pump operation, unit: m;
Hv: Vaporization pressure of liquid, unit: m (See the figure right for specific value);
Hs: Safety margin, unit: m, usually it takes 0.5m.

When calculated by the formula above, if the “H” value is positive, it indicates that the pump can operate at this suction height.

If the “H” value is negative, the pump can operate normally when the minimum inlet pressure reaches the pressure head of “H” m.

Notes: Usually the calculation above is not necessary, but the calculation is required under the following circumstances:

1. The liquid temperature is high;
2. The inlet conditions are poor;
3. The inlet pipeline is long, or the pump needs to be installed and used for suction;
4. The system pressure is too low;
5. The flow velocity of liquid is too high, causing a larger line loss.

Examples of Performance Curves

■ Applicable Principles of Performance Curves

1. The curve tolerance complies with ISO9906, Annex A;
2. The test medium is 20° C clean water that does not contain any solid impurity and air;
3. All curves are based on 3×380V electric motors with the rated speed of 2900rpm/1450rpm;
4. The curves are applicable to liquid with the kinematic viscosity $\gamma = 1 \text{ mm}^2/\text{s}$ (1cst);
5. In order prevent the danger of overheating, the pump shall be ensured to operate within the range of curves to avoid overload of motor.

The BLA series light stainless steel vertical multistage centrifugal pumps

BL(T)-A

Model Instruction

BL 32 - 2 - 2-A

The matching motor is a permanent magnet motor

Number of small impellers

Number of stages

Rated flow rate (m³/h)

Light stainless steel vertical multistage centrifugal pump

Overview Of The Product

The BLA series light stainless steel vertical multistage centrifugal pumps are non-self-priming vertical multistage centrifugal pumps designed and manufactured by absorbing advanced technology both at home and abroad, and adopt IE5 permanent magnet variable frequency motor and alloy mechanical seal, which are easy to replace. The flow passage parts of the BLA pump are all made of stainless steel, and some flow passage parts of the BLTA pumps are made of cast iron, so they are applicable to lightly corrosive media. After the products are put on the market, they are deeply favored by users for their high efficiency, energy saving, reliable quality, and wide range of use.

Application

- ⊙ Temperature range of medium: Normal type 0 ~ +68°C , hot water type 0 ~ +120°C
- ⊙ Maximum ambient temperature: +40°C
- ⊙ Maximum working pressure: 10 bar
- ⊙ When the density or viscosity of the transmission medium exceeds that of water, it is necessary to select a driving motor of high-power.
- ⊙ pH: 6.5 to 8.5

Applications Fields

- ⊙ Pressurized water supply
- ⊙ Water treatment system
- ⊙ Industrial liquid transportation
- ⊙ Farmland irrigation

Certificate

Optional Available On Request

- ⊙ Insulation class: F
- ⊙ Standard voltage (50Hz): Single phase 220v
- ⊙ Three phase: 380v or 220v

BWI series new light stainless steel horizontal multistage centrifugal pump

BWI

Model Instruction

Overview Of The Product

BWI series new light stainless steel horizontal multistage centrifugal pump is a multi-purpose non-self-priming horizontal multistage centrifugal pump. This series of products has the characteristics of high efficiency, low noise and stable operation. The whole is compact, easy to install, easy to use and maintain. The overflow part is made of high-quality 304 stainless steel stamping and welding.

Application Limits

- ◎ Thin, clean, non-combustible, and non-explosive liquid containing no solid particle or fiber
- ◎ Applicable to deliver tap water, alkaline mineral water, softened water or mildly-corrosive medium
- ◎ The use of a large-power motor must be considered when the density or viscosity of the medium delivered is higher than that of water.
- ◎ Medium temperature: 0°C -68°C for normal temperature type; 0°C -120°C for hot water type
- ◎ Ambient temperature: -15°C --+40°C ; maximum operating pressure: 1.0MPa

Applications Fields

- ◎ Air conditioning system
- ◎ Filling machinery
- ◎ Environmental engineering
- ◎ Water supply and pressurization system
- ◎ Fertilization and metering system
- ◎ Cooling system
- ◎ Industrial cleaning
- ◎ Aquaculture
- ◎ Water treatment system application
- ◎ Supporting use of chiller

Certificate

Optional Available On Request

- Fully enclosed secondary air-cooled special shaft motor (extended shaft), NSK bearing/domestic brand bearing, 50W800 cold-rolled silicon steel sheet
- ◎ Protection level: IP55
 - ◎ Insulation class: Class F
 - ◎ Working method: S1
 - ◎ Voltage level: 220V/380V/50Hz

Components

No.	Component	No.	Component
101	Pressure cylinder	520	Oblong sleeve
112-1	Deflector	531	bushing
112-2	Outlet deflector	550-2	Adjusting washer
160	Platen	592	base
161	COVER AS-FRONT	801	electric machinery
170	Inlet deflector	900	Hexagon flange bolt
230	impeller	914-1	Hexagon socket head cap screw
412-1	O-ring seal	914-2	Hexagon socket plug
412-2	O-ring seal	920	Non-metallic insert hex lock nut
433	Mechanical seal	930-1	Standard spring washer
